

SIMplistic

A Real-time SIM Logistics and Inventory Management Solution

DATASHEET

Solution Details

SIMplistix is a warehouse inventory management system which can manage an operator's entire stock ordering, acceptance and transfer processes, whilst also providing a real-time view of incoming and outgoing stock orders.

Historically, some operators have utilized large expensive monolithic ERP warehousing systems or relied on manual processes and resources to manage their stock inventory, which can lead examples of stock picking errors, stock stored at wrong locations and reporting errors, to name a few. The ever changing landscape of sales and distribution, mainly led by incorporating new digitalized channels in a COVID world, and the changing methods of offering services and delivery of stock, will make the larger monolithic systems redundant as the focus of operators moves towards a better customer experience, not just for the buying process but also the order fulfilment process.

SIMplistix Highlights

- ☑ **Cloud or on-premise** deployment options
- ☑ **Automation** - Many operators will have manual processes in place when it comes to warehousing and stock management
- ☑ **Cost savings** by reducing stock floats and introducing KPIs for the different sales channels
- ☑ **Real-time Tracking and Management** of stock levels
- ☑ **User portal with a full user management service** supporting multiple roles for the different users configured within the system
- ☑ **Mobile application for warehouse staff** to see when tasks are assigned to them and provide updates
- ☑ **Integration with 3rd party courier tracking websites services** for shipment
- ☑ **Detailed out of box reports and dashboard views available**

SIMplistix allows operators to:

- ☑ Utilize an end-to-end solution with a real-time view of sales and distribution processes
- ☑ Have visibility of exactly where stock is located within the supply chain
- ☑ Become more dynamic in terms of offering SIMs and devices through new sales channels and track them accordingly
- ☑ Optimize stock space utilization and maximize labor productivity of warehouse staff
- ☑ Become more flexible when integrating with OSS/BSS systems, improving go to market timeframes and lowering change request costs typically associated with large monolithic ERP systems

Key Benefits

- ☑ **Quicker response times** – Decrease stock ordering and stock receive process times from weeks to days
- ☑ **Reduced operating costs** – Fully automated solution to alleviate manual processes and human error
- ☑ **Higher efficiency** – Real-time data views to be able to provide the right stock at the right place at the right time
- ☑ **Improved inventory planning** – Year ahead planning and forecasting based on current year utilization on various sales input, allowing the operator to have the correct stock in place to satisfy market demand
- ☑ **Increased profitability** for the business overall
